

New accessories designed by Roberta Tosolini complete the Abimis story, adding functionality

Abimis has added the new **A_ccessori** range to its catalogue, further increasing the functionality and customisation possibilities offered by its kitchens. Created by designer Roberta Tosolini, this new range of accessories has been designed by following the company's three main guidelines: interaction between design and craftsmanship together with the desire to bring the efficiency of professional solutions into the home.

To optimise and simplify time spent in the kitchen, Abimis has introduced a new range of accessories that combine elegance and functionality without neglecting the technological aspect which, when combined with tradition, allows us to achieve and improve ergonomics in the kitchen. The past and the future come together to optimise efficiency, supported by objects that add new meaning to existing products traditionally dedicated to the culture of food.

The idea of introducing accessories is the perfect next step along the path that the company has paved for itself – a path that has made Abimis kitchens so unique: in fact, the new objects allow you to customise how spaces are organised, meeting each individual's different needs, also in terms of streamlining. The new range has been designed to improve layouts by using modular objects that are stackable and have various uses, adding freedom to manage spaces by meeting everyone's needs. The pursuit of great aesthetics also remains key in order to complete Abimis designs: simple and linear attention to detail creates uniformity and strengthens the company's story, remaining loyal to its identity.

Thanks to the addition of these unprecedented accessories, every action in the kitchen is simplified: in fact, it will become easier to tidy, store, display, cut and serve, all thanks to solutions that adapt to each person's creativity in a simple and dynamic way.

To remain loyal to its style, Abimis shall continue to use stainless steel, combining it with impressive “new entry” materials such as wood and borosilicate glass.

A_posto

This is the innovative system that makes it easier to organise the inside of drawers. Its structure is designed to create storage space depending on people's different requirements. The A_posto system is made from beech wood and completed by stainless steel splitters that allow you to place all kinds of cutlery or kitchen utensils in your preferred position, or to store your A_romi spice jars. All organisation and customisation choices can be changed on an ongoing basis. A_posto is also available in a knife holder version.

A_cqua

A carafe made from borosilicate glass, a material that can withstand changes in temperature, making it ideal to cool and serve water, preserving its freshness and flavour. The lines that define the shape of A_cqua are synthetic and are enriched by the silhouette of the grip that brings to mind the A of Abimis.

A_fette

A system made up of two stackable chopping boards made from beech wood, designed to fulfil and complete various functions. The A_fette 1 chopping board is designed to perfectly hold a Gastronorm baking tray and to optimise chopping and cooking to the greatest extent

possible. In fact, it allows you to cut, mince and place ingredients on the baking tray in an easy and fluid way. To further improve comfort of use, the chopping board can rest against the edge of the sink in order to simplify the process of washing and cutting food.

A_fette2 is a practical chopping board for bread and is also made from beech wood. It is characterised by a grill that allows crumbs to fall directly into the collection tray, which is extremely easy to remove and clean. To make best use of space, these chopping boards fit inside each other when not in use and are perfectly stackable.

A_ggiungi

These are the perfect containers to store supplies. They are also made from borosilicate glass, just like their “sister”, **A_cqua** - a material that is particularly well-suited to storing and preserving food. They have wooden lids and are available in the following size: H 14 cm, diameter 10 cm.

A_romi

Designed to store all kinds of spices and aromas, these jars are made from borosilicate glass and their size corresponds to the grooves in the **A_posto** drawer accessory, making it easier to store them and keep the kitchen nice and tidy. Elegant and functional, they have beech wood lids.

A_ttacco

This system is based on a series of magnets being attached to part of the kitchen wall, giving you freedom to define the spaces depending on your needs and allowing you to always have knives and utensils “at your fingertips”.

A_ggancio

Hooks designed to hang all non-metal accessories, allowing them to be displayed and organised along the kitchen wall.

A_ppoggio

Bookshelf or iPad holder, ideal also for the **A_romi** spice jars.
